Checklist for Diamond DA62

Edition #: 1.2 Nxi Edition date: 25.03.2021

Please observe:

The file you are receiving hereby combines all three sections of the checklist: Normal Checklist, Emergency Checklist and Abnormal Checklist.

All pages of a new edition will have the same new “edition #” and “edition date”, even if only one page was amended and all other pages still have the same, unchanged content.

Therefore the “List of Effective Pages” (LEP) is provided. It is here where you can see whether a particular page was amended. Pages which have been amended by a new edition will be marked yellow. For all other pages you will see which original “edition #” (and of course any higher “edition #”) is still valid.

Note:

The system of assigning “Edition #” is as follows:
- if the revision affects all types, a new edition # (without a decimal figure) will be assigned to all of the checklists
- if the revision does not affect all types, the affected checklists will get subsequent “decimal figures” until a major revision affecting all checklists is issued.

Have a lot of nice flights and happy landings!
Peter Schmiedleitner

Comments explaining Edition # 1.2 Nxi are on page 2 of this document

NORMAL CHECKLIST

Diamond DA62

This checklist is compiled according the guidelines of GAMA Specification No.1, SECTION 3, para 3.5, SECTION
3A, para 3A.5 and SECTION 4, para 4.5.
The "Amplified Normal Procedures", „Amplified Emergency Procedures“ and „Amplified Abnormal Procedures“
according GAMA Specification No. 1 are in the DA42 Airplane Flight Manual Chapters 4A, 3 and 4B.

This checklist is a Recommended Operator Checklist and for reference only.
It is not a substitute for and does not supersede the current approved Airplane Flight Manual or any of its
supplements or parts thereof, or any training or procedures required by any regulatory or advisory bodies.
This checklist may not contain all procedures shown in the Airplane Flight Manual. For a comprehensive listing
of all procedures consult the Airplane Flight Manual.
Use of the checklist is at the user's sole risk and discretion.
Any possible liability of Diamond Flight Training and/or Diamond Aircraft Industries for any damages, injury or
death resulting from its use is excluded.
All such terms and conditions shall be deemed to be explicitly accepted in full by using the checklist.
If you do not understand, or if you disagree with, any of the above terms and conditions and in any jurisdiction
that does not give effect to all provisions of these terms and conditions any use of the checklist is not permitted.

Use of the electronic checklist (if available):
Before using the electronic checklist on the G1000 the following sections have to be completed using this paper checklist:
• Preflight interior + exterior
• Preflight exterior
• Check before engine start items 1 to 24 (may be completed by heart).

This checklist also serves as a back up for the electronic checklist in case the G1000 MFD is not available.
**Attention!**
For use of fuel additives see AFM

* if ice protection is installed
** if AUX tanks are installed
*** if RACC is installed

**PREFLIGHT INTERIOR**

**PREFLIGHT EXTERIOR**

1. **Left main gear**
   - Strut (min 5cm bare piston) & downlock
   - Tire condition, position mark
   - Brake, hydraulic line
   - Gear door & linkage

2. **Left engine nacelle**
   - Drain gasolator
   - 2 air inlets / 2 air outlets
   - Spinner, propeller
   - Gearbox oil level
   - Engine oil level
   - Cowling
   - Nacelle underside
   - Venting pipe
   - Exhaust
   - **Check AUX tank full ?**

3. **Left wing**
   - Wing leading edge, top- and bottom surface
   - Tank drain
   - Stall warning
   - Tank air vent
   - Fuel filler cap
   - Pitot probe (cover removed)
   - Vortex generators (10)
   - Wing tip, position light
   - Static discharger
   - Aileron (freedom of movement, linkage covers, 4 hinge pins)
   - Wing flap (linkage covers, 10 hinge pins)
   - **AUX pump cooler air in- & outlet**
   - **AUX tank vents**
   - **Drain AUX tank**

4. **Left fuselage**
   - Step
   - Rear cabin door
   - Rear window
   - Fuselage left side
   - Static source
   - Antennas
   - **RACC air outlet**

---

*Check de-ice fluid quantity*

*Select de-ice pump 1*

*De-ice HIGH/MAX*

*Check DEIC PRES LO+HI out*

*Select de-ice pump 2*

*Check DEIC PRES LO+HI out*

*Ice lights ON*

*Check de-ice function*

*Check external lights*

*Check stall warning*

*Check pitot tube heat*

*Pitot heat OFF*

*External lights OFF*

*De-ice, ice lights OFF*

*Electric Master OFF*
**Tail**
Elevator & rudder (freedom of movement, hinges)
Elevator & rudder trim - tabs
Static dischargers
Tail skid, tie down

**Right fuselage**
Fuselage right side
Static source
Rear window
*** RACC air inlet
Step

**Right wing**
** AUX pump cooler
    air in- & outlet
** AUX tank vents
** Drain AUX tank
Wing flap (linkage covers, 10 hinge pins)
Aileron (freedom of movement, linkage covers, 4 hinge pins)
Static discharger
Wing tip, position light
Vortex generators (10)
Wing leading edge, top- and bottom surface
Fuel filler cap
Tank air vent
Tank drain
Cabin air vent inlet

**Right engine nacelle**
** Check AUX tank full ?
2 air inlets / 2 air outlets
Spinner, propeller
Gearbox oil level
Engine oil level
Cowling
Nacelle underside
Venting pipe
Exhaust
Drain gasolator

Ventilation air inlet

**Right main gear**
Strut (min 5cm bare piston) & downlock
Tire condition, position mark
Brake, hydraulic line
Gear door & linkage

**Nose section**
L + R front baggage door locked
OAT sensor
EPU connection
Landing / Taxi light
With WX radar: nose cone surface, lightning protection strips and attachment screws
*De-ice fluid tank cover

**Nose gear**
Strut (min 10cm bare piston)
Gear door & linkage
Tire condition, position mark

Chocks removed
Tow bar removed
## CHECK BEFORE ENGINE START

1. Preflight check ....................................... COMPLETED 1
2. Baggage and tow bar ............................... SECURED 2
3. **AUX PUMPS (2) .................................... OFF 3
4. *** AUX PWR switch ............................... OFF 4
5. Fuel selectors (2) .......... ON, safety guard closed 5
6. Power levers (2) ................................. IDLE 6
7. Parking brake ............................................ SET 7
8. Alternate Air ....................................... CLOSED 8
10. Gear selector ........................................... DOWN 10
11. Pitot heat .......................................... OFF 11
12. Avionic master ................................. OFF 12
13. Electric master ................................. OFF 13
14. Fuel pumps (2) .................................. OFF 14
15. Engine masters (2) .................................. OFF 15
16. Alternate static ................................... CLOSED 16
17. Alternators (2) ...................................... ON 17
18. VOTER switches (2) .......................... AUTO 18
19. * Anti Ice ........................................ OFF/OFF 19
20. All light switches ...................................... OFF 20
21. Circuit breakers ................................. CHECKED IN 21
22. ELT ................................................ ARMED 22
23. Flap selector ......................................... UP 23

If starting LH engine or using RACC with external power:

a. Prop area.................................CHECK CLEAR  a
b. External power .........................CONNECT b
   c. *** Only at OAT above 10°C RACC ..........ON c

24. Electric master ................................. ON 24
25. Rudder pedals ................................. ADJUSTED 25
26. Flight controls ................................. CHECKED 26
27. Flaps full travel -->LDG -->UP .............. CHECKED 27
28. Trims ................................................ CHECKED 28
29. Gear warning + lights, fire detector .... TEST 29

[Checklist continued next page]
CHECK BEFORE ENGINE START continued

30 * De-ice ANNUN TEST ............................................ ON 30
31 * DEICE LVL LO caution ... CHECKED ON if applic. 31
32 Passengers .......................................................... INSTRUCTED 32
33 Safety harnesses ........................................... FASTENED 33
34 All doors ............................................................ CLOSED 34
35 G1000 .................................. POWERED, ACKNOWLEDGED 35
36 MFD-EIS .......................................................... ENGINE 36
37 Fuel Quantity ...... CHECKED, RESET/SET if requ. 37
38 Fuel temperature ............................................. CHECKED 38
39 Total time in service ................................. NOTED 39
40 * DEIC PRESS LO caution ............... CHECKED ON 40
41 * De-ice ANNUN TEST ..................................... OFF 41
42 Power levers (2) ............................................. IDLE 42
43 ACL (strobe) ................................................... ON 43
44 *** RACC .......................................................... OFF 44

End of Checklist

ENGINE START PROCEDURE

Normal sequence: first start LH engine
Propeller area ................................................................. CLEAR
Engine Master .......................................................... ON
Annunciations / Eng.Instr .................................. CHECKED
Glow indication .......................................................... OFF
Start button .......................................................... PRESS
Oil pressure ................................................. OUTSIDE RED within 3 sec
Voltage, Electrical load ....................... CHECK INDICATION
Annunciations / Eng.Instr ......................... CHECK

If external power was used:

External power ....................... DISCONNECT

Start RH engine, procedure as above
CHECK AFTER ENGINE START

1 Oil pressure ............................................. CHECKED 1
2 RPM 710 +/- 30 ............................................. CHECKED 2
3 Fuel selectors (2) ........................................... X-FEED 3
4 Pitot heat ...... ON, annunciation + Amps checked 4
5 Pitot heat ........................................... OFF 5
6 Avionics master ........................................... ON 6
7 WX radar (if installed) ............................................. SBY 7
8 *** Only at OAT above 10°C AUX PWR switch ........... ON 8
9 *** RACC ........................................... ON 9

FMS SETUP

I nitialize profile (AUX 4, MAP)
F light plan
R adios (COM, NAV, ADF, DME, CDI, BRG ½)
P erformance (speed bugs; Flight ID if applicable)

10 FMS setup ........................................... COMPLETED 10

AUTOPilot TEST

DISCONN press, check electric trim not working
AP ON, check annunciations and FD
DISCONN press, check AP off
GA button press, check FD commands climb
FD off

11 Autopilot test ........................................... COMPLETED 11
12 Flood light ........................................... CHECKED, ON as required 12
13 Position lights ........................................... ON as required 13
14 Fuel Selectors (2) ........................................... ON 14
15 Altimeters (2) ........................................... SET 15
16 Standby attitude module ................................. CHECKED 16
17 Transponder ................................. MODE / CODE CHECKED 17
18 Engine temperatures ................................. CHECKED 18
19 Parking brake ................................. RELEASED 19

Max power 50% until engine temperatures in green range
End of Checklist

DURING TAXI

Check Brakes
Check nose wheel steering
Check flight instruments

### LINE UP PROCEDURE

- Landing light............................... ON
- Approach sector............................. CLEAR
- Runway........................................ IDENTIFIED

Available power check (see pg.10)...... PERFORMED
AFTER TAKE-OFF PROCEDURE

Brakes .................................................. APPLY
Gear ...................................................... UP
Alternate air: OPEN in rain, snow, visible moisture
At safe altitude: Flaps ..................................... UP
Climb power ........................................... 95%

CLIMB TO CRUISE CHECK

1 Gear .............................................. CHECKED UP 1
2 Flaps ............................................. CHECKED UP 2
3 Fuel pumps (2) ................................. OFF 3
4 Climb power .................................... SET 4
5 Alternate air .................................. AS REQUIRED 5
6 Landing light .................................... OFF 6

End of Checklist

DESCENT / APPROACH CHECK

1 Landing data .............................. RECEIVED 1
2 Altimeters (2) .............................. SET 2
3 COM / NAV / FMS ....................... SET 3
4 Safety harnesses ......................... FASTENED 4
5 Adjustable backrests .................... UPRIGHT 5
6 Parking brake ............................... CHECKED RELEASED 6
7 Rudder trim ................................ AS REQUIRED 7
8 Gear warning + lights .................. TEST 8
9 Landing light .................................. ON 9

Normal Approach:

10 Fuel selectors (2) ....................... CHECKED ON 10
11 Fuel pumps (2) ............................... ON 11

End of Checklist

1 engine out Approach:

10 Fuel selector (good engine) .......... CHECKED ON 10
11 Fuel pumps (good engine) .............. ON 11

End of Checklist

FINAL CHECK

1 Flaps ............................................. LDG 1
2 Gear ............................................. 3 GREENS CHECKED 2
3 Rudder trim .................................. NEUTRAL 3

Ensure that the parking brake lever is in the released position!
**GO AROUND PROCEDURE**

Power .......................................................... MAX
Flaps .............................................................. T/O
Positive rate of climb:
Gear .............................................................. UP
Flaps .............................................................. UP
Continue with take-off profile
At safe altitude:
Climb power .................................................. 95%

**AFTER LANDING CHECK**

*When clear of runway*

1. Alternate air ................................................ CLOSED 1
2. Pitot heat ......................................................... OFF 2
3. Flaps ............................................................... UP 3
4. Fuel pumps (2) ............................................... OFF 4
5. * De-ice systems ........................................ OFF 5
6. Landing/Taxi light ................................. AS REQUIRED 6

End of Checklist

**PARKING CHECK**

1. Parking brake ................................................ SET 1
2. Power levers (2) ............... max 10% for 1 min. 2
3. ELT ................................................................. CHECK not activated 3
4. Engine / System page ......................... CHECKED 4
5. Engine / Fuel page ...... TTL TIME IN SVC NOTED 5
6. Avionic master ............................................... OFF 6
7. Electrical consumers except ACL (strobe) .... OFF 7
8. Engine Masters (2) ................................. OFF 8
9. ACL (strobe) .................................................. OFF 9

When engine indications x-ed out:

10. Electric Master ........................................... OFF 10
11. Interior light ............................................... CHECKED OFF 11

End of Checklist

**SECURING THE AIRCRAFT**

Release parking brake, use chocks.
Cover the pitot probe.
Attach tie down ropes to mooring points.
All masses and speeds are for ACFT with MTOM **1999 kg**

### STALLING SPEEDS KIAS for 1999 kg

For other parameters “out of green range” see Abnormal Checklist

## L/R OIL PRES

- Reduce power on affected engine
- Be prepared for loss of oil and an engine failure; land at nearest suitable airfield

## L/R OIL TEMP

- Check oil pressure
  - If oil pressure too low (outside green range):
    - Reduce power on affected engine
    - Expect loss of engine oil
    - Be prepared for an engine failure
  - If oil pressure in green range
    - Reduce power on affected engine
    - Increase airspeed
    - If oil temperature not returning to green range:
      - Be prepared for an engine failure; land at nearest suitable airfield
L/R GBOX TEMP

- Reduce power on affected engine
- Increase airspeed
  - If gearbox temperature still in red range:
    - Land at nearest suitable airfield
    - Be prepared for an engine failure

L/R ENG TEMP

- Check G1000 for **LOW COOL LVL** caution light
  - If **LOW COOL LVL** caution light OFF
    - **During climb:**
      - Reduce power on affected engine by 10% or more as required
      - Increase airspeed by 10 KIAS or more as required
      - If coolant temp. not returning to green range within 60’:
        - Reduce power on affected engine as much as possible and increase airspeed
    - **During cruise:**
      - Reduce power on affected engine
      - Increase airspeed
      - If coolant temp. not returning to green range:
        - Be prepared for an engine failure; land at nearest suitable airfield
  - If **LOW COOL LVL** caution light ON
    - Reduce power on affected engine
    - Expect loss of coolant fluid
    - Be prepared for an engine failure

L/R FUEL TEMP

- Reduce power on affected engine
- Increase airspeed
- Transfer fuel from AUX to MAIN tank if applicable
  - If not returning to green range:
    - Land at nearest suitable airfield
L/R FUEL PRES

- Check fuel quantity
- FUEL SELECTOR of affected engine: check ON
- FUEL PUMPS of affected engine: ON
  - If warning remains:
    ⇒ FUEL SELECTOR of affected engine: CROSSFEED
  - If warning still remains:
    ⇒ Be prepared for an engine failure

L/R ALTN AMPS

- Check circuit breakers
- Reduce electrical load and land at nearest suitable airfield

L/R STARTER

**On ground:**
⇒ Affected power lever IDLE
⇒ Affected engine master OFF
⇒ Electric master OFF

**In flight:**
⇒ Pull **LDG LT/START CB** (RH Main Bus; push again when LDG light needed)
⇒ Watch engine cowling and instruments
⇒ Land at nearest suitable airfield

L/R DOOR OPEN
REAR DOOR OPEN
FWD DOOR OPEN

- Reduce airspeed immediately
- Check all doors visually
  - If passenger door unlocked:
    ⇒ airspeed below 140 KIAS, land at nearest suitable airfield
    ⇒ do not try to lock door in flight
  - If front baggage door open:
    ⇒ reduce airspeed to keep door(s) in stable position, land at nearest suitable airfield

Edition #1.2 Nxi
Does not replace the Airplane Flight Manual
G1000 WARNING
L/R ENG FIRE
OR ENGINE FIRE OBSERVED

✔ On ground:
1. Engine masters (2) ........................................ OFF 1
2. Fuel selectors (2) ........................................ OFF 2
3. Mayday call .................................................. CONSIDER 3
4. Electric master .............................................. OFF 4
   When engine and aircraft stopped:
5. Doors .......................................................... OPEN 5
   Evacuate

✔ During Take-off
1. Cabin heat & defrost........................................ OFF 1
2. Emergency windows (2) ............................... OPEN 2
3. Proceed according

   ENGINE FAILURE DURING TAKE-OFF → page 8...

G1000 WARNING
L/R ENG FIRE

• In flight:
  ⇒ Evaluate the situation
      • If Engine Fire observed:
  ⇒ Proceed according

   ENGINE FIRE IN FLIGHT → page 8
ENGINE FAILURE DURING TAKE-OFF

REJECTED TAKE-OFF OR EMERGENCY RE-LANDING

1. Power ............................................. OFF 1
2. Brakes ........................................... APPLY 2
3. ATC .............................................. INFORM 3

If necessary:
4. Engine Masters (2) .............................. OFF 4
5. Fuel selectors (2) ................................. OFF 5
6. Electric Master .................................. OFF 6

ENGINE FAILURE DURING FLIGHT

AND ENGINE SHUTDOWN

If airspeed below Vmca:
Perform Vmc recovery procedure

Airspeed above Vmca:

1. Power ............................................. INCREASE up to MAX 1
2. Airspeed ........................................... min BLUE LINE 2
3. Landing gear ..................................... UP 3
4. Flaps .............................................. UP 4
5. Power lever (affected engine) . REDUCE TO VERIFY 5
6. Engine Master (affected engine) .............. OFF 6

Above safe altitude
7. Power (life engine) ...... up to MAX CONTINUOUS 7
8. Alternator (dead engine) ....................... OFF 8
9. Fuel pumps (dead engine) ..................... OFF 9
10. Fuel selector (dead engine) ................... OFF 10

ENGINE FIRE IN FLIGHT

1. Cabin heat & defrost ............................ OFF 1
2. Emergency windows (2) ....................... OPEN 2
3. Shut down the engine according
   ENGINE SHUT DOWN -procedure ↑
ENGINE TROUBLESHOOTING

If

L OR R
ECU A AND B FAIL simultaneously

and ALL of the following conditions exist:

o indicated LOAD unchanged
o perceived thrust is reduced
o engine noise level changes or engine running rough

1. POWER lever ....................... IDLE for 1 second 1
2. POWER lever .................slowly increase to 1975 RPM 2
   • If engine shows power loss during the
     POWER lever increase
3. POWER lever ....................... idle for 1 second 3
4. POWER lever ....................... slowly increase 4

   stop prior to the RPM where former engine power loss
   was observed

Do not increase the POWER lever past the propeller speed of 1975 RPM or the
setting determined in step 4. An increase of engine power beyond this setting
leads into another power loss.
With this power setting the engine can provide up to 65% at the maximum
propeller speed of 1975 RPM

5. Land at nearest suitable airfield ....................... 5
   End of Checklist

Otherwise:

1. Power lever (good engine) . INCREASE up to MAX 1
2. Circuit breakers .........................CHECK/RESET 2
   • If engine OK: continue, land ASAP  End of Checklist
3. VOTER switch .......................SWAP between A and B 3
   • If engine OK: continue, land ASAP  End of Checklist
4. VOTER switch .........................AUTO 4
   • If engine OK: continue, land ASAP  End of Checklist
5. Above 10000 ft: Fuel pumps (affected engine) . ON 5
6. Fuel selector (affected engine) ........ CROSSFEED 6
   • If engine OK: continue,  End of Checklist
7. Fuel selector (affected engine)ON or CROSSFEED 7
8. Alternate air .................................OPEN 8
   • If engine OK: land as soon as practicable  End of Checklist
   • If engine still not OK: Be prepared for
     ENGINE FAILURE IN FLIGHT, land ASAP  End of Checklist
**ENGINE RESTART**

*Reason for shutdown must be ascertained*

<table>
<thead>
<tr>
<th>With starter</th>

</tr>
</tbody>
</table>

1. Power (affected engine)......................... IDLE 1
2. Fuel selector (affected engine)............... ON 2
3. Alternate air ......................... AS REQUIRED 3
4. Alternator (affected engine) ................. ON 4
5. Engine Master (affected engine) ............. ON 5

For restart with starter motor:
6. Starter ............... ENGAGE when prop stationary 6
7. Circuit breakers ........ CHECK/RESET if necessary 7

If engine started:
8. Power (affected engine)....................... MODERATE 8
9. Engine instruments .......... check GREEN RANGE 9
**OSCILLATING RPM**

**FIXED RPM**

**RPM OVERSPEED**

1. Power lever ........................................ change setting 1
   - If no success:
     Check G1000 for ECU FAIL caution
   - If ECU FAIL caution indicated:
2. VOTER switch ................................. unaffected ECU 2
   - If no success:
3. VOTER switch ......................................... AUTO 3
    Land at nearest suitable airfield

- **In case of RPM overspeed:**
  Be prepared for ENGINE FAILURE IN FLIGHT

**LANDING WITH DEFECTIVE MAIN GEAR TIRE**

1. ATC ........................................ INFORMED 1
   - For landing:
     Land on RWY side with “good” tire
     Keep wing on “good” side low
     Support directional control with brake

**LANDING WITH DEFECTIVE BRAKES**

1. Safety harnesses .............. FASTENED and TIGHT 1
   - After touchdown (if necessary):
   2. Engine Masters (2) ......................... OFF 2
   3. Fuel selectors (2) ................................. OFF 3
   4. Electric Master ...................................... OFF 4
LANDING GEAR UNSAFE WARNING

If on for more than 20 seconds:
1. Airspeed .......................... max 162 KIAS 1
   In cold temperature:
2. Airspeed .......................... max 110 KIAS 2
3. Gear selector .......................... RECYCLE 3
   ➤ If landing gear **extension** unsuccessful:
      Continue with MANUAL EXTENSION
   ➤ If landing gear **retraction** unsuccessful:
      Consider flight with landing gear down

MANUAL EXTENSION OF LANDING GEAR

1. Airspeed .......................... max 162 KIAS 1
2. Gear indicator lights .................. TEST 2
3. Electric master .......................... CHECK ON 3
4. Bus voltage .................. CHECK NORMAL 4
5. Circuit breaker .......................... CHECK 5
6. Gear selector .......................... DOWN 6
7. Manual extension handle .................. PULL 7
   If necessary
8. Airspeed .......................... max 110 KIAS 8
   Apply moderate yawing
9. Gear indicator lights .................. CHECK 3 GREENS 9

LANDING GEAR UP LANDING

(Landing gear completely retracted)
1. Approach .......................... NORMAL 1
   If time/situation allows: just before touchdown:
2. Power lever .......................... IDLE 2
3. Engine Masters (2) .................. OFF 3
4. Fuel pumps (2) .................. OFF 4
5. Fuel selectors (2) .................. OFF 5
   Immediately after touchdown:
6. Electric Master .......................... OFF 6
ELECTRICAL FIRE ON GROUND

1. Mayday call ........................................... CONSIDER 1
2. Electric Master ................................................. OFF 2
3. Power levers (2) .............................................. IDLE 3
4. Engine Masters (2) ............................................ OFF 4
5. Fuel selectors (2) ............................................. OFF 5

When engine and aircraft stopped:
6. Doors ................................................................. OPEN 6  
   Evacuate

ELECTRICAL FIRE IN FLIGHT

1. Mayday call ........................................... CONSIDER 1
2. Avionic master ................................................ OFF 2
3. Electric master ................................................ OFF 3
4. Cabin heat & defrost .......................................... OFF 4
5. Emergency windows ............. OPEN as necessary 5  
   Land at nearest suitable airfield

COMPLETE ELECTRICAL FAILURE

* Leave icing area

1. Circuit breakers ........................................ CHECK all IN 1
   ● If no success:
2. Map light, if necessary .......... try to switch ON 2
3. Power .................................................. SET 3  
   according power lever position and/or engine noise
4. Flaps ............................................. VERIFY POSITION 4

   Land at nearest suitable airfield
   Landing gear may slowly extend
   For landing apply “Manual extension of landing gear”
   Standby Attitude Module will be powered for min 1 hour
**CABIN SMOKE ABOVE 10.000 FT**

1. Oxygen.................................................CHECK ON 1
2. Emergency descent............................INITIATE 2
   When passing 10.000 ft
3. Oxygen......................................................OFF 3
   Land at nearest suitable airfield

**CABIN FIRE ABOVE 10.000 FT**

1. Oxygen......................................................PUSH OFF 1
2. Emergency descent............................ INTIATE 2
   Land at nearest suitable airfield

**OXYGEN PRESSURE LOSS ABOVE 10.000 FT**

1. Oxygen......................................................PUSH OFF 1
2. Oxygen pressure...............................CHECKED, note down 2
3. Emergency descent...............................INTIATE 3
   When passing 10.000 FT:
4. Oxygen pressure...............................CHECK AGAIN 4
   If oxygen pressure constant: .....Continue flight
   If oxygen pressure dropped: ... Land at nearest suitable airfield

**EMERGENCY DESCENT**

1. Flaps .........................................................UP 1
2. Landing Gear ...........................................DOWN 2
3. Power levers .............................................IDLE 3
4. Airspeed .................................................AS REQUIRED 4
   $Vno=162$ KIAS  $Vne=205$ KIAS
UNINTENTIONAL FLIGHT INTO ICING
Leave icing area, continue with item 1

* INADVERTENT ICING ENCOUNTER &
* EXCESSIVE ICE ACCUMULATION

1 * De-ice system..........................HIGH + MAX  1
2 Pitot heat.............................................. ON  2
3 Cabin heat & defrost..............................  ON  3
4 Alternate air ........................................... OPEN  4
5 * Windshield de-ice ...........USE AS APPROPRIATE  5
6 Emergency windows.................. OPEN as required  6

● * When de-ice system does not work properly:
   Continue with ICE PROTECTION FAILURE

* ICE PROTECTION FAILURE

1 Airspeed ......89/96 to 154 KIAS (172 KTAS) until final  1
2 Flaps .................................................. UP for landing  2
3 Approach with residual ice..........97/101 KIAS  3
4 Landing distance.............. according AFM x 1,3  4

SUSPICION OF CARBON MONOXIDE

1 Cabin heat & defrost................................. OFF  1
2 Ventilation ............................................. OPEN  2
3 Emergency windows............................. OPEN  3
G1000 CAUTION LIGHTS

Engine instrument indications outside of green range

- COOLANT temperature high/low ................. page 21
- OIL temperature high/low........................ page 21
- OIL pressure high/low............................ page 21
- FUEL temperature high/low.................... page 21
- VOLT low........................................ page 22
- RPM high........................................ page 22

Other abnormal situations

- Hydraulic pump fail or continuous ops... page 22
- AUX fuel transfer fail .......................... page 22

L/R FUEL LOW

- Check fuel quantity
- Avoid uncoordinated flight
  - If LH & RH quantities show remarkable difference:
    - Expect loss of fuel on side with lower indication
    - Use x-feed: Fuel selector to x-feed on side with LOW FUEL indication
      (Above 10000 ft: Fuel pumps this side ON)

L/R AUX FUEL E

- L/R auxiliary fuel pump OFF

25.03.2021
Edition # 1.2 Nxi
Diamond Flight Training
Page 16
Does not replace the Airplane Flight Manual
**L/R ECU A or B FAIL**

1. VOTER switch ........................................ check AUTO 1
2. Other ECU caution .................................. check OFF 2

*Clearing procedure:*
3. VOTER switch ................................. set to failed ECU 3
   Wait 5 seconds
4. Voter switch ............................................... AUTO 4
   • If ECU caution persists termimate flight preparation

**L/R ECU A or B FAIL**

Remark: *in case of ECU fail the system automatically switches to the other ECU*
1. Alternate Air ............................................. OPEN 1
2. Fuel pumps LH/RH .............................. ON 2
3. Circuit breakers .......................... CHECK/RESET if necessary 3
4. VOTER switch ....................................... check AUTO 4
   • If ECU caution persists:
      ⇒ ECU caution clearing procedure may be used:
      BUT: In case of negative 1-eng climb rate only if a suitable
      landing site is available within gliding distance.
      Be prepared for loss of engine power.
5. Safe altitude ............................................. CHECK 5
6. Airspeed .................................................. BLUE LINE 6
7. Flaps ...................................................... check UP 7
8. Landing gear .................................. check UP 8
9. Other ECU caution .......................... check OFF 9
10. VOTER switch ................................. set to failed ECU 10
    Wait 5 seconds
11. Voter switch ............................................... AUTO 11
    • If ECU caution persists:
       • Land at nearest suitable airfield
       • If additional engine problems are observed:
       • Go to Emergency Checklist page 9
       ENGINE TROUBLESHOOTING
L OR R
ECU A FAIL and ECU B FAIL SIMULTANEOUSLY

➢ Go to Emergency Ckl page 9 ENGINE TROUBLESHOOTING
**L/R VOLTS LOW**

*Remark: possible reasons are*
- fault in the electrical power supply
- Alternators OFF

➢ Continue with “Engine instrument indications outside of green range” – VOLTS low, page 20

**L/R ALTN FAIL**  

**ALTERNATOR FAILED**

- If in icing conditions:
  ⇒ Leave icing area as soon as practicable
  ➢ Alternator on affected side OFF
  ➢ Monitor bus voltage
  ➢ Reduce electrical consumers
- If both alternators failed:
  ⇒ See Abnormal Checklist “Both Alternators failed”, ↓

**L ALTN FAIL + R ALTN FAIL**

Reduce all electrical equipment to a minimum:
  ➢ Avionic Master: OFF
  ➢ LH/RH Alternator: OFF
  ➢ Transponder: STBY
  ➢ Gear: DOWN
- When down and locked:
  ⇒ Pull manual gear extension handle
  ➢ Stall/Pitot heat: OFF
  ➢ All lights:OFF
  ⇒ Expect battery power to last for 30 minutes
  ⇒ Expect engine stoppage after this time
  ⇒ Land ASAP

**L/R COOL LVL**  

**ENGINE COOLANT LEVEL LOW**

➢ Monitor annunciations / engine instruments
➢ Check coolant temperature
➢ See “Engine instrument indications outside of green range” – COOLANT TEMPERATURE
PITOT FAIL

STALL HT FAIL

PITOT HT OFF

STALL HT OFF

- check pitot heat ON, if in icing conditions
- expect loss of airspeed indication
- expect loss of aural stall warning
- leave area with icing conditions (see Emergency Checklist page 15, “Unintentional flight into icing”)

DEICE LVL LO

DE-ICING FLUID LEVEL LOW

- Maximum duration of ice protection in NORMAL mode: 50 min, in HIGH mode: 25 min

DEIC PRES LO

DE-ICING PRESSURE LOW

- If in OAT above 10°C and below 20°C warning appears in HIGH mode switch to MAX mode to cancel warning.
  Above 20°C OAT warning cancellation may not be possible.

- Switch DE-ICE to HIGH
  - If DEIC PRES LO light still ON
    - PUMP1 / PUMP2: select other pump
    - If necessary prime pump by activating windshield pump
  - If DEIC PRES LO light still ON
    - Activate ALTERNATE switch
  - If DEIC PRES LO light still ON
    - Go to Emergency Checklist page 15 ICE PROTECTION FAILURE

- If DEIC PRES LO light OFF
  - Continue flight
    - (de-icing fluid flow: 26.4 lt/hr)
  - Monitor ice protection system operation
  - Check de-icing fluid level periodically

DEIC PRES HI

DE-ICING PRESSURE HIGH

- Possible reduced system performance
- Leave area with icing conditions
- Unscheduled maintenance is required
ENGINE INSTRUMENT INDICATIONS OUTSIDE OF GREEN RANGE

**COOLANT temperature high**
- Refer to Emergency Checklist page 5, “L/R ENG TEMP”

**COOLANT temperature low**
Remark: During low power descent from high altitude coolant temperature may decrease. Consider increasing power.
- Check G1000 for LOW COOLANT LVL caution light
  - If “LOW COOLANT LVL caution light” ON
    - Reduce power on affected engine
    - Expect loss of coolant fluid
    - Be prepared for an engine failure

**OIL temperature high**
- Refer to Emergency Checklist page 4, “L/R OIL TEMP”

**OIL temperature low**
- Increase power
- Reduce airspeed

**OIL pressure high**
- On ground during warm up with low oil temperature
  - Reduce power until oil press. green, continue warm up at reduced power
- During flight
  - Check oil temperature
  - Check coolant temperature
    - If temperatures within green range
      - Oil press. indication may be faulty; watch temperatures
    - If temperatures outside of green range
      - Reduce power on affected engine;
      - Land at nearest suitable airfield, be prepared for engine fail

**OIL pressure low**
- Refer to Emergency Checklist page 4, “L/R OIL PRES”

**FUEL temperature high**
- Refer to Emergency Checklist page 5, “L/R FUEL TEMP”

**FUEL temperature low**
- Increase power on affected engine
- Reduce airspeed
  - If not returning to green range:
    - Be prepared for an engine failure;
    - Land at nearest suitable airfield
**VOLTS low**

- **On ground:**
  - Check alternators ON
  - Check circuit breakers
    - If LOW VOLTS CAUTION still indicated on the G1000:
      - Discontinue operation; terminate flight preparation

- **In flight:**
  - Check alternators ON
  - Check circuit breakers
  - Switch off unnecessary electrical equipment
  - If LOW VOLTS CAUTION still indicated on the G1000:
    - Apply L/R ALTN FAIL caution procedure, page 17

**RPM high**

- Reduce power on affected engine
- Keep RPM in green range with appropriate power lever setting
- If problem not solved:
  - Refer to Emergency Checklist page 11 “RPM overspeed”
  - Land at nearest suitable airfield

**OTHER ABNORMAL SITUATIONS**

**Hydraulic pump: failure or continuous operation**

- Check gear indication lights
- Prepare for manual landing gear extension

**L/R Auxiliary fuel XFER FAIL**

- Both AUX PUMPS: OFF
- Check fuel pumps OFF
- Check fuel quantity
- Use X-feed to keep main tank fuel unbalance within 1 USG (Above 10000 ft: Fuel pumps ON)
- Switch remaining AUX PUMP ON
- Use X-feed to keep main tank fuel unbalance within 1 USG (Above 10000 ft: Fuel pumps ON)
- Amend flight plan to allow for reduced amount of available fuels
