

Fire spotted by Diamond DA42 MPP

Diamond Aircraft Discovered Forest Fires

The flight crews of the Austrian aircraft manufacturer Diamond Aircraft Industries GmbH, based in Wiener Neustadt, discovered a start-up forest fire during a test flight with the DA42 MPP (Multipurpose Platform), a new camera system that has been tested for disaster relief. After assessing the situation, the crew immediately contacted the tower of the Wiener

Neustadt Ost (LOAN) airport, which had informed the responsible personnel who were not aware of this incident. The aircraft circled over the firebrand until the fire brigade arrived to control the situation and report on the development.

The special aircraft of Diamond Aircraft are, among

other things, excellently suitable for the support of fire fighting. By means of a special camera, infra-red aerial photographs can be localized to the ground in real-time. Already in August 2010 two special aircraft from Diamond helped in the fight against the devastating wildfires in the Ukraine.

About Diamond:

Diamond produces a full range of high quality certified all composite aircraft including the 2 seat DA20, the 4 seat DA40, 4 seat twin engine DA42 and 7 seat twin engine DA62. Diamond uses proprietary lead-free jet fuel piston engines, made by Austro Engine GmbH of Austria, for the DA40, DA42 and DA62. Diamond applies modern technologies to achieve high fuel efficiency, low noise, excellent performance and safety. Our aircraft are flown by private pilots and professional flight training operators and institutions worldwide.

The entire Diamond range is distributed in the USA and Canada by Diamond Aircraft Industries Inc. (Canada).
